

Dear CloudKitchens Hiring Team,

I am excited to apply for the Software Engineering Intern position at CloudKitchens. As a Computer Science student at the University of Washington graduating in June 2026, I am eager to contribute to building scalable, intelligent systems that power the future of food delivery.

Through my academic and research experience, I have developed strong foundations in software engineering and data-driven problem solving. As an Undergraduate Research Assistant in Dr. Juhua Hu's lab, I work on predicting the onset of sepsis in hospital patients using time-series datasets. This role has strengthened my ability to explore complex datasets, tune machine learning models, and think critically about performance, scalability, and reliability. Working with real-world healthcare data has also reinforced the importance of writing clean, maintainable, and well-tested code.

In addition to research, I have built hands-on software projects, including a Java-based facial detection system using OpenCV and JavaFX that performs real-time face detection through a live webcam feed. This project deepened my understanding of system design, debugging, and integrating external libraries into production-ready applications. I am comfortable programming in Java and Python, and I regularly use tools such as Git, IntelliJ, and VS Code to build and maintain projects.

What excites me most about CloudKitchens is the opportunity to work on foundational systems that operate at global scale. The intersection of infrastructure, AI, and real-world operations is particularly compelling to me. I am motivated by challenging technical problems, enjoy diving into complex systems, and take pride in ownership—from design to implementation and testing. I thrive in collaborative environments and am eager to learn from experienced engineers while contributing meaningfully to the team.

I would welcome the opportunity to further discuss how my background and enthusiasm for scalable software systems can contribute to CloudKitchens' continued innovation. Thank you for your time and consideration.

Sincerely,
Jack Curry
